

ABSTRACT

The objective of this project is to develop a comprehensive job portal website aimed at assisting job seekers in finding suitable employment opportunities. The website will serve as a bridge between job seekers and employers, offering a streamlined platform for job listings, applications, and notifications. A comprehensive list of job vacancies categorized by industry, location, and job type helps users in finding their jobs. Users can apply for jobs directly through the website and rate job postings. Mechanisms for users and companies to report spam, ensuring a trustworthy and reliable platform. The main advantage of the website is its ability to notify users of job availability as soon as new opportunities that match their search criteria become available.

MODULES

- Admin module
 - Company module
 - User module
